Lens Studio Hiring Team
Specs Inc.
Snap Inc.
Bellevue, WA

Re: Software Engineer, Specs Lenses C++, Level 5

Dear Lens Studio Hiring Team,

I am writing to express my strong interest in the **Software Engineer, Specs Lenses C++** position on the Lens Studio team at Snap. Over the past five years at Electronic Arts, first as a Gameplay & Animation Software Engineer at **Maxis** on *Project Rene* (*The Sims*) and now as a Tools & Tech-Art Software Engineer at **EA Lifestyle**, I have built performance-critical runtime systems in modern C++ and the tools that let other developers and artists work faster on top of them, which is exactly the intersection Lens Engine and Lens Studio occupy.

At **EA Maxis Studios**, I architected a multi-threaded, asynchronous path-planning and navigation API in Unreal Engine 5 and C++ that delivered deterministic crowd routing and real-time obstacle avoidance within a strict frame budget of under 1.5ms. Working in a large, multi-disciplinary codebase, I profiled and optimized runtime memory and frame budgets to eliminate hitches in dense simulation scenarios, and built in-editor tuning tools and visual debuggers with animators and designers, which taught me to treat developer productivity as a first-class goal alongside reliability and maintainability.

In my current role at **EA Lifestyle**, I engineered a high-throughput Unreal Engine C++ plugin that exports runtime character trajectory, pose, and velocity data to populate motion-matching databases, built a Maya/Python stylization tool adopted across multiple internal studios that cut redundant manual keyframing by over 70%, and prototyped ML-assisted authoring pipelines with PyTorch and ONNX runtime for automated asset tagging and pose generation in production DCC tools.

AI-assisted and agentic development is a core part of how I work. I use Claude Code, Cursor, and Codex daily, and I have hands-on experience with multi-agent systems, agent harness engineering, and agent evaluation. One example is the pipeline that produced this application: I authored agent skills and scoped context files so that coding agents read a job posting, tailor my resume against an evidence-backed skills inventory under strict truthfulness rules, compile it, and verify the output. Building it reinforced what makes agentic workflows dependable: careful context management, clear tool boundaries, and verification at every step.

I also built a custom C++ game engine (*Hoowan Game Engine*) with an OpenGL renderer, EnTT-based ECS, and desktop editor, and bring experience with TypeScript, Qt and ImGui, GitHub Actions, code and design reviews, unit testing, and technical roadmap planning. Based in Seattle, I would be glad to join the team in Bellevue and bring pragmatic, quality-focused C++ engineering to Lens Engine and Lens Studio. Thank you for your time and consideration. I look forward to speaking with you.

Sincerely,

Juan Becerra
