Re: Software Engineer III - Enterprise Intelligence (Role ID: 215963)

Dear Yen Feng,

I am writing to express my strong interest in the **Software Engineer III** position within Electronic Arts' Central Technology Data & Insights organization. Over the past five years at Electronic Arts (four years as a Gameplay & Animation Software Engineer at **Maxis** on *Project Rene* (*The Sims*) and currently at **Lifestyle** in Kirkland), I have built a strong foundation in high-throughput C++ and Python systems, runtime data pipelines, and cross-studio engineering tools. I would be thrilled to bring my familiarity with EA's live-service ecosystem and my passion for scalable systems engineering to the Enterprise Intelligence Group.

In my current role at **EA Lifestyle**, I engineered a high-throughput Unreal Engine C++ plugin that captures and exports runtime character trajectory, pose, and velocity data pipelines to populate motion-matching query databases. Alongside data export pipelines, I architected an extensible Maya/Python automation tool adopted across multiple internal EA studios, reducing redundant manual workflows by over 70%, and integrated PyTorch and ONNX Runtime pipelines for automated asset tagging. Previously at **EA Maxis Studios**, I architected a multi-threaded, asynchronous path-planning and navigation API in C++ for *Project Rene*, enabling deterministic routing and real-time obstacle avoidance for shared multiplayer simulation. Through deep profiling and optimization of compute and memory across concurrent evaluation graphs and spatial queries, I eliminated runtime bottlenecks while partnering across disciplines to build diagnostic and visual debugging tools.

While my recent roles at EA have focused on runtime gameplay, animation, and cross-studio tooling, the underlying engineering challenges, including designing low-latency multi-threaded systems, building reliable data extraction and query pipelines, optimizing compute and memory budgets, and driving developer productivity across studios, align closely with the work of the Enterprise Intelligence team. Combined with my proficiency in C++, Java, Python, and SQL, my familiarity with AWS, Docker, and CI/CD workflows, and my ongoing graduate coursework in Machine Learning & Deep Learning at the University of Washington, I am eager to apply my systems background to EA's unified Big Data platform.

As an internal EA engineer based in the Seattle/Kirkland area, I am excited about the opportunity to collaborate with the Central Technology team to deliver reliable, scalable data platform solutions. Thank you for your time and consideration, and I look forward to discussing how my experience can contribute to the team.

Sincerely,

Juan Becerra
