Re: Machine Learning Engineer III (Role ID: 212201)

Dear Sara Khurshid Uppal,

I am writing to express my strong interest in the **Machine Learning Engineer III** position with EA Player Security Data Labs. Over the past five years at Electronic Arts (four years as a Gameplay & Animation Software Engineer at **Maxis** on *Project Rene* (*The Sims*) and currently at **Lifestyle** in Kirkland), I have focused on engineering high-throughput runtime systems, building data extraction plugins for query databases, and integrating machine learning pipelines into production workflows. Combined with my ongoing graduate coursework in Machine Learning & Deep Learning at the University of Washington and my early career leading live-service AAA testing at Lionbridge, contributing to the data and ML infrastructure that protects player trust and fair play across EA games is a mission that resonates strongly with me.

In my current role at **EA Lifestyle**, I prototyped and integrated ML-assisted authoring pipelines using Python, PyTorch, and ONNX Runtime to enable automated asset tagging and procedural pose generation. To support data-driven runtime systems, I also engineered a high-throughput Unreal Engine C++ plugin that captures and exports character trajectory, pose, and velocity state to train and populate motion-matching query databases, and architected a cross-studio Python automation tool that reduced manual workflows by over 70%.

Previously at **EA Maxis Studios**, I architected a multi-threaded, asynchronous path-planning and navigation API in C++ for *Project Rene*, enabling deterministic routing and real-time obstacle avoidance for shared multiplayer simulation. I also implemented motion-matching query evaluation systems, built visual debuggers and diagnostic tools, and profiled runtime memory and compute across character evaluation graphs and spatial queries under dense multi-agent simulation workloads.

As an internal EA engineer based in the Seattle/Kirkland area with strong proficiency in Python, SQL, Rust, and Modern C++, hands-on experience with PyTorch/ONNX, Docker, AWS, and CI/CD, and graduate-level ML/DL training, I am excited about the opportunity to collaborate with the Player Security Data Labs team. Thank you for your time and consideration, and I look forward to discussing how my experience can contribute to the team.

Sincerely,

Juan Becerra
