Romain Almes
EA Studios - Respawn
Electronic Arts
Vancouver, BC / Los Angeles, CA

Re: Gameplay Engineer (Apex Legends) (Role ID: 216048)

Dear Romain Almes,

I am writing to express my strong interest in the **Gameplay Engineer** position at Respawn Entertainment. Over the past five years at Electronic Arts (four years as a Gameplay & Animation Software Engineer at **Maxis** on *Project Rene* (*The Sims*) and currently at **Lifestyle**), I have focused on building responsive, high-performance player-facing gameplay systems in C++ while partnering closely with designers, animators, QA, and production. I would be thrilled to bring my passion for fluid movement and moment-to-moment gameplay feel to Apex Legends.

During my tenure at **EA Maxis Studios**, I implemented core player-facing locomotion and runtime animation systems in Unreal Engine 5 and C++, including motion-matching, direct/indirect control schemes, and custom IK solvers, to deliver responsive, tactile character controls. I also architected a multi-threaded, asynchronous path-planning and navigation API that enabled deterministic routing and real-time obstacle avoidance for shared multiplayer simulation. Working across a large-scale multi-disciplinary codebase, I partnered directly with gameplay designers and technical animators to prototype, iterate, and polish gameplay features while managing technical risk and long-term maintainability. To support rapid design iteration and stability, I authored in-editor tuning tools and visual debuggers and profiled runtime memory and compute across character evaluation graphs and spatial queries.

In my current role at **EA Lifestyle**, I have continued engineering high-throughput runtime C++ systems, building an Unreal Engine C++ plugin that captures and exports runtime character trajectory, pose, and velocity state to drive motion-matching locomotion query databases. Beyond my studio work at EA, I have engineered a custom C++ game engine (*Hoowan Game Engine*) featuring an entity-component system, input polling, and collision resolution pipeline, as well as a 3D first-person shooter (*DoomSlop*) with responsive movement and camera controls, hitscan weapon raycasting, combat state feedback, and a custom radar minimap.

As an internal EA engineer based in the Pacific Northwest with a deep appreciation for Apex Legends' industry-leading movement and combat feel, I am excited about the opportunity to collaborate with Respawn's team to deliver polished, reliable features for a live multiplayer audience. Thank you for your time and consideration, and I look forward to discussing how my experience can contribute to the team.

Sincerely,

Juan Becerra
