Sara Khurshid Uppal
Hiring Manager – CT - Security (EA Player Security Data Labs)
Electronic Arts
Kirkland, WA

Re: Machine Learning Engineer III (Role ID: 212201)

Dear Sara Khurshid Uppal,

I am excited to apply for the **Machine Learning Engineer III (Role ID: 212201)** position with **EA Player Security Data Labs** in Kirkland. Over the past five years as a Software Engineer at **Electronic Arts** (across **EA Lifestyle** in Kirkland and **EA Maxis Studios**), I have focused on engineering high-throughput runtime systems, building data extraction plugins for query databases, and integrating machine learning pipelines into production workflows. Combined with my ongoing graduate coursework in Machine Learning and Deep Learning at the University of Washington and my early career leading live-service AAA testing at Lionbridge, contributing to the data and ML infrastructure that protects player trust and fair play across EA games is a mission that resonates strongly with me.

At **EA Lifestyle**, I prototyped and integrated ML-assisted authoring pipelines using **Python, PyTorch, and ONNX Runtime** to enable automated asset tagging and procedural pose generation. To support data-driven runtime systems, I also engineered a high-throughput Unreal Engine C++ plugin that extracts and exports character trajectory, pose, and velocity feature data to train and populate motion-matching query databases, and architected a cross-studio Python tool that reduced manual workflows by over 70%.

Previously at **EA Maxis Studios** (*Project Rene*), I architected a multi-threaded, asynchronous path-planning and navigation API in C++ operating within strict latency (<1.5ms) and memory budgets. I also implemented motion-matching query evaluation systems, built visual debuggers and diagnostic tools, and profiled runtime evaluation graphs to eliminate performance bottlenecks under dense multi-agent simulation workloads. Earlier in my career at **Lionbridge**, I led a team of QA testers performing combinatorial and regression testing for live-service AAA titles, authoring technical repro steps and engine-level diagnostics in JIRA.

Bringing five years of internal EA engineering experience alongside strong skills in Python, SQL, Rust, and Modern C++, hands-on experience with PyTorch/ONNX, Docker, AWS, and CI/CD, and graduate-level ML/DL training at the University of Washington, I am eager to transition my systems and ML pipeline experience into EA Player Security Data Labs. Thank you for your time and consideration, and I look forward to discussing how I can contribute to your team in Kirkland.

Sincerely,

Juan Becerra
