Re: Software Engineer UI (Role ID: 216375)

Dear Bobby Wilkinson,

I am writing to express my strong interest in the **Software Engineer UI** position on the Jedi Engineering team at Respawn Entertainment. Over the past five years at Electronic Arts (four years as a Gameplay & Animation Software Engineer at **Maxis** on *Project Rene* (*The Sims*) and currently at **Lifestyle**), I have built responsive C++ and Unreal Engine systems, modular user interfaces, and intuitive interactive workflows in close collaboration with designers, technical artists, QA, and production. I would be thrilled to bring my C++ and Unreal Engine expertise, ownership mindset, and passion for polished player experiences to the Star Wars Jedi team.

During my tenure at **EA Maxis Studios**, I partnered directly with gameplay designers and technical animators in Unreal Engine 5 to design and build modular in-editor tuning UIs and interactive visual debuggers, while also implementing core player-facing locomotion and runtime animation systems in C++, including motion-matching, direct/indirect control schemes, and custom IK solvers. I also architected a multi-threaded, asynchronous path-planning and navigation API for shared multiplayer simulation and profiled runtime memory and compute across character evaluation graphs and spatial queries to maintain frame stability.

In my current role at **EA Lifestyle**, I architected an extensible Maya/Python tool featuring a modular PySide/Qt user interface adopted across multiple internal EA studios, reducing manual workflows by over 70%, alongside an Unreal Engine C++ plugin that captures and exports runtime character trajectory, pose, and velocity state. Beyond my studio work at EA, I have engineered a custom C++ game engine (*Hoowan Game Engine*) featuring mouse-and-keyboard input event polling and a companion desktop editor UI for scene composition and entity management, as well as a 3D first-person shooter (*DoomSlop*) with responsive mouse-and-keyboard controls, hitscan weapon raycasting, combat state feedback, and a custom canvas HUD and radar minimap.

As an internal EA engineer based in the Pacific Northwest and an avid PC gamer, I am excited about the opportunity to collaborate with Respawn's team to deliver scalable in-game HUDs, menus, and PC-specific UX features. Thank you for your time and consideration, and I look forward to discussing how my experience can contribute to the team.

Sincerely,

Juan Becerra
