Bobby Wilkinson
Hiring Manager — EA Studios - Respawn (*Star Wars Jedi* Team)
Electronic Arts
Orlando, FL / Los Angeles, CA / Vancouver, BC

Re: Software Engineer UI (Role ID: 216375)

Dear Bobby Wilkinson,

I am writing to express my strong interest in the **Software Engineer UI (Role ID: 216375)** position on the *Star Wars Jedi* Engineering team at Respawn Entertainment. Having spent the past five years at Electronic Arts—first as a Gameplay & Animation Software Engineer at **EA Maxis Studios** on *Project Rene* (*The Sims*) and currently as a Tools & Tech-Art Software Engineer at **EA Lifestyle**—I have extensive experience building responsive C++ and Unreal Engine systems, modular user interfaces, and intuitive interactive workflows in close collaboration with designers, technical artists, and QA. I would love to bring my C++ and Unreal Engine expertise, ownership mindset, and passion for polished PC and console player experiences to the *Jedi* team.

Throughout my time at EA, designing modular, user-centric interfaces and responsive input systems has been central to my work. At **EA Maxis Studios**, I partnered directly with gameplay designers and technical animators in Unreal Engine 5 to design and build modular in-editor tuning UIs and interactive visual debuggers for complex behavior trees, while also implementing core C++ character control systems and diagnosing complex runtime and memory bottlenecks. In my current role at **EA Lifestyle**, I architected an extensible Maya/Python tool featuring a modular PySide/Qt user interface that was adopted across multiple internal EA studios—reducing redundant manual workflows by over 70%—alongside high-throughput Unreal Engine C++ plugins and interactive ML-assisted tools that prioritize seamless user control.

Beyond my professional work at EA, I am an avid PC gamer and builder of interactive applications. In my custom C++ game engine (*Hoowan Game Engine*), I engineered the mouse-and-keyboard input event polling system and built a companion desktop editor UI for scene composition and entity management. More recently, I developed a 3D PC/browser first-person shooter (*DoomSlop*) featuring responsive mouse-and-keyboard navigation, dynamic cursor/aim handling, and a custom HUD and radar minimap.

While much of my UI engineering at EA has focused on Unreal Engine 5 in-editor interfaces, visual debuggers, and PySide/Qt desktop applications alongside core C++ gameplay systems, that combination gives me a strong foundation for owning scalable in-game HUDs, menus, and PC-specific UX features on the *Star Wars Jedi* team. Thank you for your time and consideration, and I look forward to discussing how I can contribute to Respawn.

Sincerely,

Juan Becerra
